Precision quick chuck

Clamping jaw

Jaw tip ø0-2

Jaw tip ø1-3

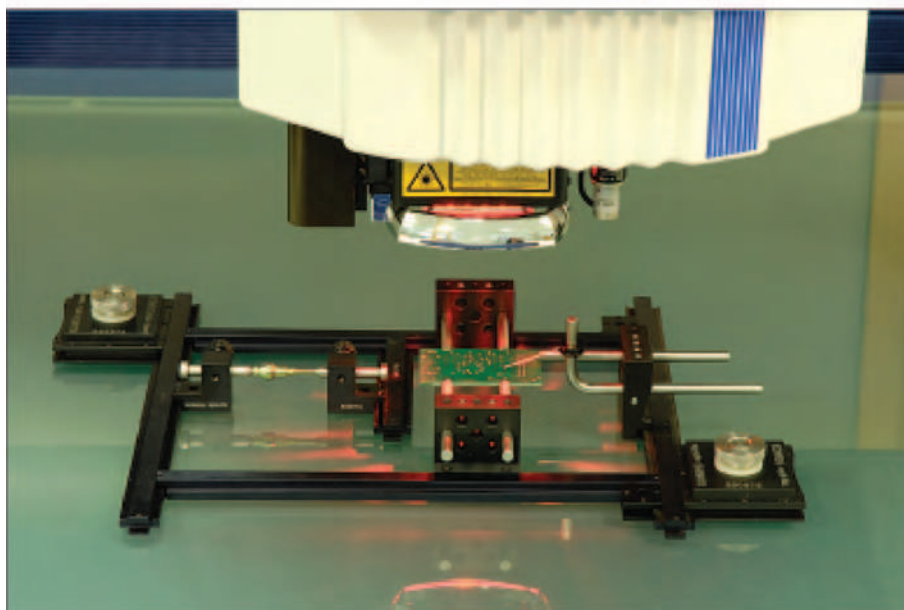

Jaw tip ø4-5

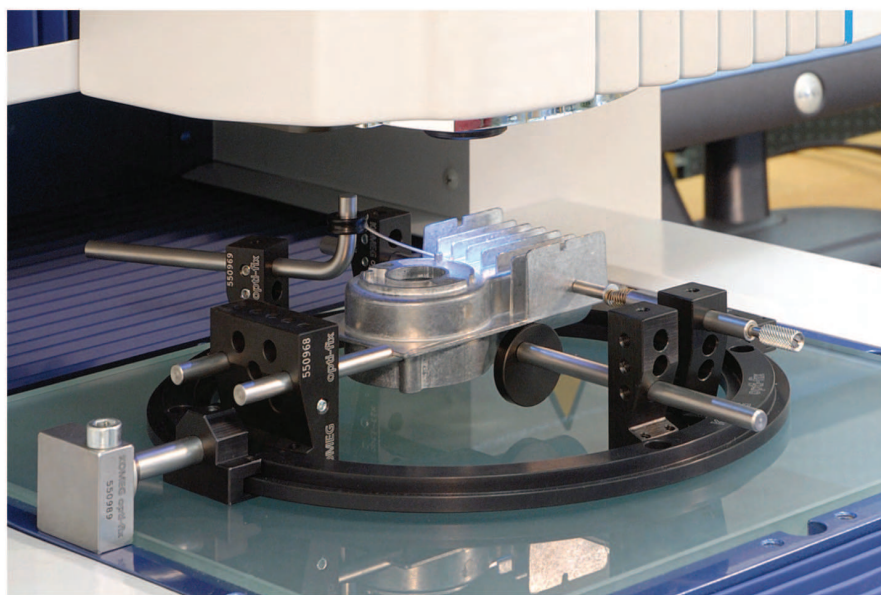

Perpendicular jaw tip

Opti-Fix brochure on request

Electronic board raised to give clearance for the components on its underside. Placed directly on the glass stage of the machine without the OPTI-FIX clamping system, the electronic board would not lie flat. The set-up is held on the glass surface by 2 suction cups.

Example of application for holding prismatic parts (without the OPTI-FIX clamping system, the part could not be positioned correctly). The set-up is held on the glass surface by a magnetic clamp attached to the stage frame.
